Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The patent term adjustment to date is 36 days. If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the term adjustment will be 36 days.

If a continued prosecution application (CPA) was filed in the above-identified application, the filing date that determines patent term adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) system. (<http://pair.uspto.gov>)

Any questions regarding the patent term extension or adjustment determination should be directed to the Office of Patent Legal Administration at (703)305-1383.

DATE MAILED: 10/17/2002

Notice of Possible Fee Increase on October 1, 2002

If a reply to a "Notice of Allowance and Fee(s) Due" is filed in the Office on or after October 1, 2002, then the amount due may be higher than that set forth in the "Notice of Allowance and Fee(s) Due" since there may be an increase in fees effective on October 1, 2002. See Revision of Patent and Trademark Fees for Fiscal Year 2003; Notice of Proposed Rulemaking, 67 Fed. Reg. 30634, 30636 (May 7, 2002). Although a change to the amount of the publication fee is not currently proposed for October 2002, if the issue fee or publication fee is to be paid on or after October 1, 2002, applicant should check the USPTO web site for the current fees before submitting the payment. The USPTO Internet address for the fee schedule is: <http://www.uspto.gov/main/howtofees.htm>.

If the issue fee paid is the amount shown on the "Notice of Allowance and Fee(s) Due," but not the correct amount in view of any fee increase, a "Notice to Pay Balance of Issue Fee" will be mailed to applicant. In order to avoid processing delays associated with mailing of a "Notice to Pay Balance of Issue Fee," if the response to the Notice of Allowance and Fee(s) due form is to be filed on or after October 1, 2002 (or mailed with a certificate of mailing on or after October 1, 2002), the issue fee paid should be the fee that is required at the time the fee is paid. If the issue fee was previously paid, and the response to the "Notice of Allowance and Fee(s) Due" includes a request to apply a previously-paid issue fee to the issue fee now due, then the difference between the issue fee amount at the time the response is filed and the previously paid issue fee should be paid. See Manual of Patent Examining Procedure, Section 1308.01 (Eighth Edition, August 2001).

Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee. Authorization for this examiner's amendment was given in a telephone interview with John R. Moses on 10-8-2002.

2. The application has been amended as follows:

- Claim 1 has been replaced with the following:

—1. A combination valve support and sealing element for use in a filter cartridge wherein the filter cartridge includes an annular filter element having a hollow core and an end cap and is disposed in a housing closed by an end plate having a central opening surrounded by an array of radial openings spaced a fixed radial distance from ~~[one another]~~ a central axis defined by the central opening and wherein the radial openings are also spaced equidistant from one another, the combination valve support and sealing element comprising:

a molded unitary body of flexible resilient material;

the unitary body having a central opening coaxial with the end plate central opening and of a constant diameter, ~~[which central opening is coaxial with the central opening of the end plate,]~~ the diameter of the unitary body central opening being greater than the diameter of the

Art Unit: 1723

end plate central opening and less than [radial distances between] the diameter of the area circumscribed by the array of radial openings;

the unitary body having a first annular section which projects into the hollow core of the filter element for sealing with the filter element and a second annular section axially coextensive with the first annular section to form the unitary body central opening, the first annular section having [a] an annular sealing ring thereon for sealing with the end cap and, the second annular section sealing only with the end plate around the central opening [~~through the end plate~~] thereof;

the unitary body having [a] an annular radially projecting flange which is axially spaced from an end of the second annular section and projects radially beyond the [~~space~~] radial openings in the end plate for sealing around the [~~space~~] radial openings to provide an anti-drainback valve; [,] and

a plurality of radially extending ribs on the annular radially [~~extending~~] projecting flange, the radially extending ribs having rib portions projecting axially [~~on~~] along the first annular section of the unitary body and being axially spaced from the annular sealing ring [~~on the first section of the body member~~], which annular sealing ring deflects radially inwardly when the filter element is clogged in order to provide a bypass for fluid when fluid is unable to flow through the filter element.—;

- Claim 3, line 2, “an” has been replaced with —the— and in line 3, “oil” has been replaced with —fluid—;

Art Unit: 1723

- Claim 7 has been replaced with the following:

7. A valve support and sealing element in combination with a filter cartridge in which the filter cartridge includes an annular filter element having a hollow core and an end cap and is disposed in a housing closed by an end plate having a central opening surrounded by an array of radial openings spaced a fixed radial distance from ~~[one another]~~ a central axis defined by the central opening and wherein the radial openings are also spaced equidistant from one another, the combination valve support and sealing element comprising:

a molded unitary body of flexible resilient material;

the unitary body having a central opening coaxial with the end plate central opening and of a constant diameter, ~~[which central opening is coaxial with the central opening of the end plate,]~~ the diameter of the unitary body central opening being greater than the diameter of the end plate central opening and less than ~~[radial distances between]~~ the diameter of the area circumscribed by the array of radial openings;

the unitary body having a first annular section which projects into the hollow core of the filter element for sealing with the filter element and a second annular section axially coextensive with the first annular section to form the unitary body central opening, the first annular section having [a] an annular sealing ring thereon for sealing with the end cap and, the second annular section sealing only with the end plate around the central opening ~~[through the end plate]~~ thereof;

the unitary body having [a] an annular radially projecting flange which is axially spaced from an end of the second annular section and projects radially beyond the ~~[spaced]~~ radial

openings in the end plate for sealing around the ~~[space]~~ radial openings to provide an anti-drainback valve; [,] and

a plurality of radially extending ribs on the annular radially ~~[extending]~~ projecting flange, the radially extending ribs having rib portions projecting axially ~~[on]~~ along the first annular section of the unitary body and being axially spaced from the annular sealing ring ~~[on the first section of the body member]~~, which annular sealing ring deflects radially inwardly when the filter element is clogged in order to provide a bypass for oil when oil is unable to flow through the filter element.—;

- Claim 9, line 4, before “the” (second occurrence), —a flange of— has been added; and in line 5, “flange” has been deleted; and
- The ABSTRACT has been replaced with the following on a separate sheet in the specification:

—A valve support and sealing element **23** for use with a filter cartridge is in the form of a molded unitary body (figure 2). The body includes

- (i) a first annular section **30** projecting into the filter hollow core **13** and having a sealing ring **33** for sealing with the end cap **53**;
- (ii) a second annular section **34** sealing with the end plate **17** at interface **35**; and
- (iii) a flange **38** radially projecting from the second section **34** to cover the inlet openings **19** to act as an anti-drainback valve.

Art Unit: 1723

The flange **38** includes radial ribs **42** that also extend axially on the first section **30** but are spaced from the sealing ring **33**. In operation, upon clogging of the media **14**, oil flows between the ribs **42** and the sealing ring **33** is deflected radially inwardly to provide a bypass for the oil.—

Required Drawing Changes

3. The following changes to the drawings have been approved by the examiner and agreed upon by applicant:

- reference no. "24" will be removed from figure 1 since such is not found in the specification;
- reference no. "46" on the left side of figure 2, will be changed to 42 since the leader thereof indicates the ribs and reference no. "42", also on the left side of figure 2, will be changed to "44" since the leader thereof indicates the axial portion of the rib (as described on page 5 of the specification).

In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

Reasons for Allowance

4. The following is an examiner's statement of reasons for allowance:

- The closest cited art—Palmai (U.S. 3,669,144)—fails to anticipate or render obvious, alone or in any proper combination, the plurality of radially extending ribs on the annular radially projecting flange that includes a rib portion that axially extends along the first annular section but is spaced from the annular sealing ring such that the annular sealing
